

# Drawing a Graph Using Body Gestures

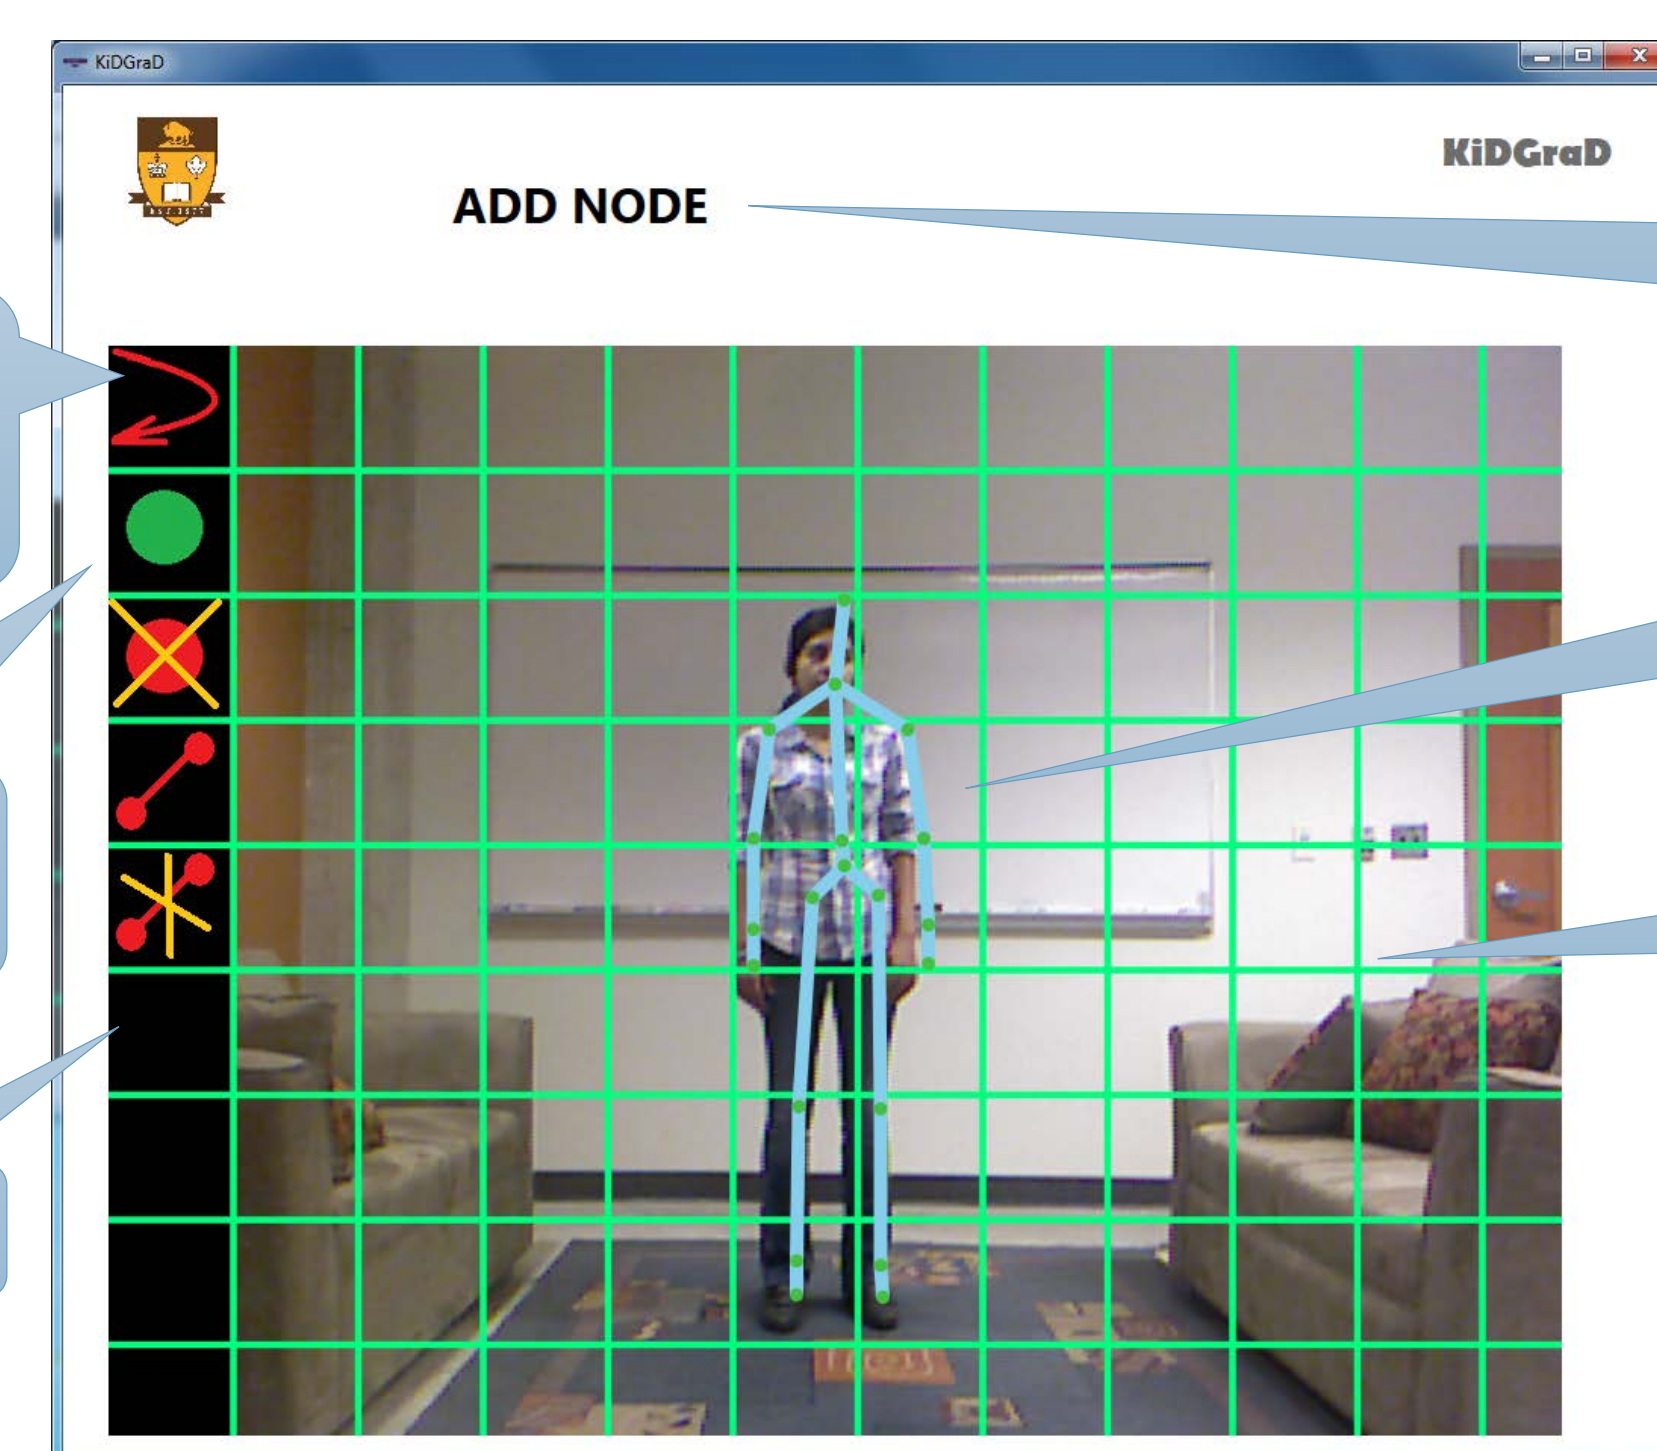

Yeganeh Bahoo, Andrea Bunt, Stephane Durocher, Sahar Mehrpour  
Department of Computer Science, University of Manitoba, Winnipeg, Canada

## KiDGraD

- Using **Kinect** to **Detect** skeletons for **Graph Drawing**
- A gesture-based user interface for drawing graphs
- Recognizes specific body gestures using the **Microsoft Kinect** sensor
- Evaluated a prototype implementation with a preliminary user study

## Interface

Reset button  
clears the  
drawing area.

Active command  
in **green**

Sidebar

Active command in  
**black** (Unlocked) or  
**red** (Locked)

User image  
overlayed with  
skeleton in **blue**

Gridded drawing  
area

## Features

- KiDGraD uses a **Microsoft Kinect** to recognize body positions and gestures
- Specific gestures correspond to selecting operations, adding or removing nodes, adding or removing edges, and selecting grid points.
- Users can select operations using gestures or voice commands.

## Add/Remove Node Functions

- Step 1: Activate the command.

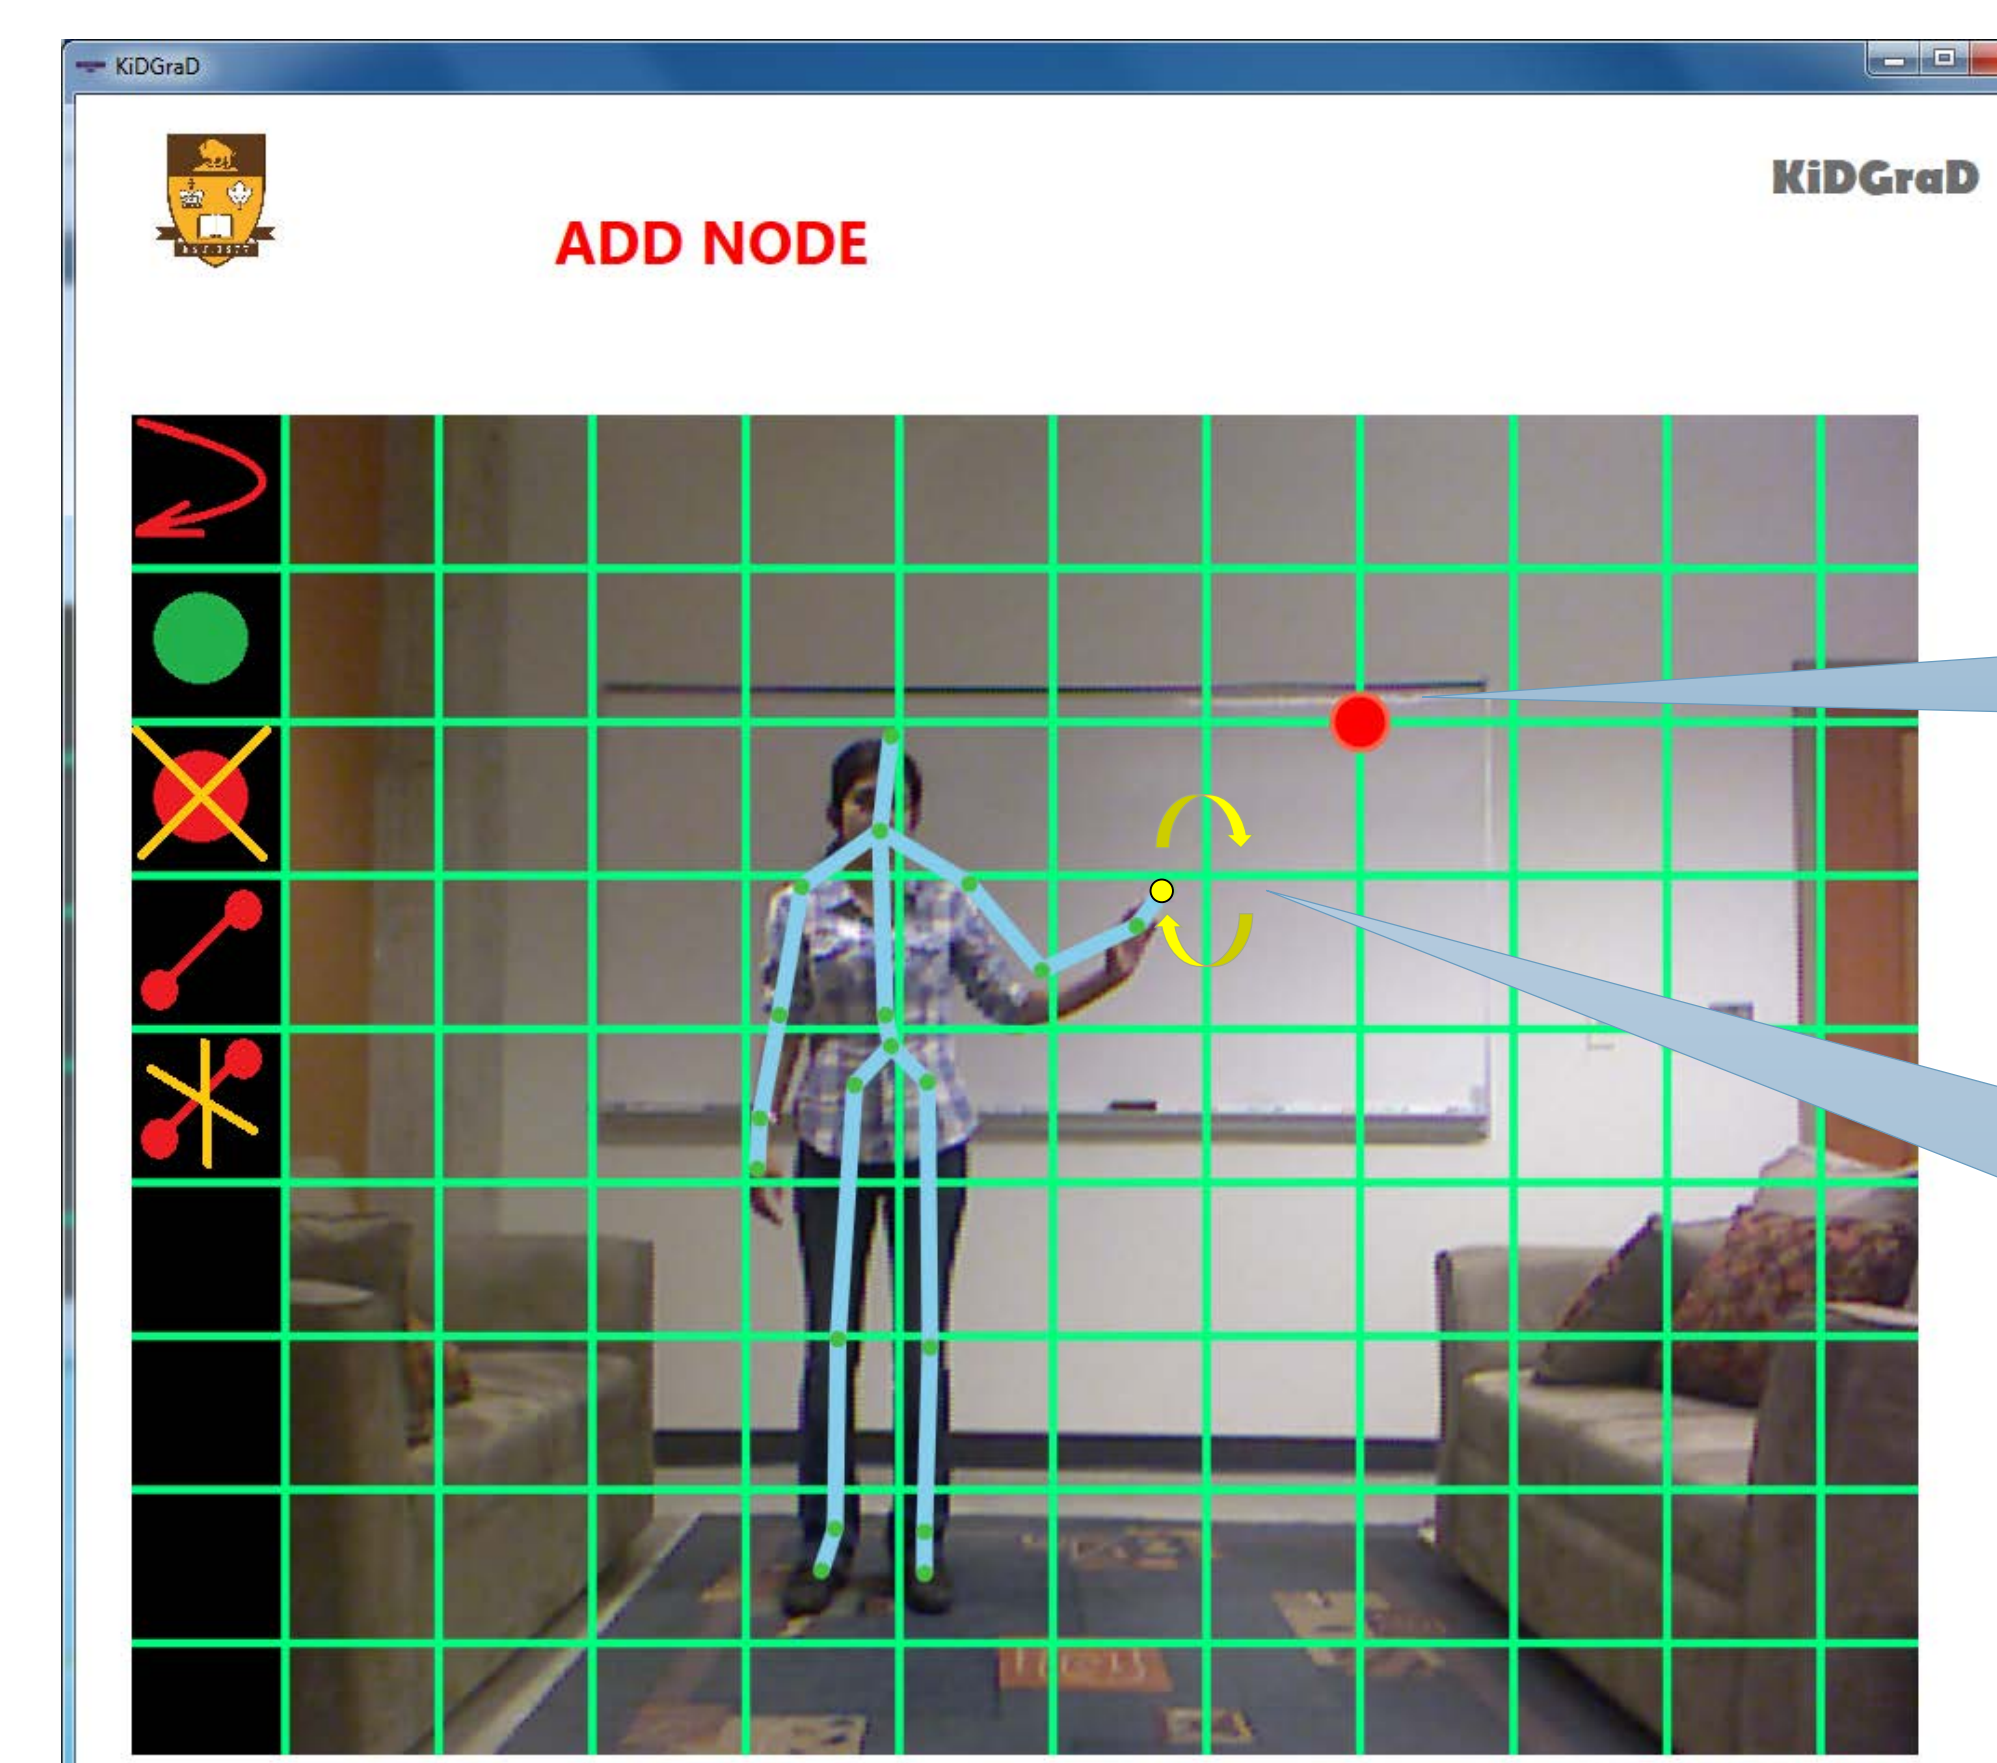

Posture for "Add Node"

Posture for "Remove Node"

- Step 2: Draw / delete a node.

Nodes are  
drawn in **red**.

Rotate the right  
hand around  
the target grid  
point twice.

## Add/Remove Edge Functions

- Step 1: Activate the command.

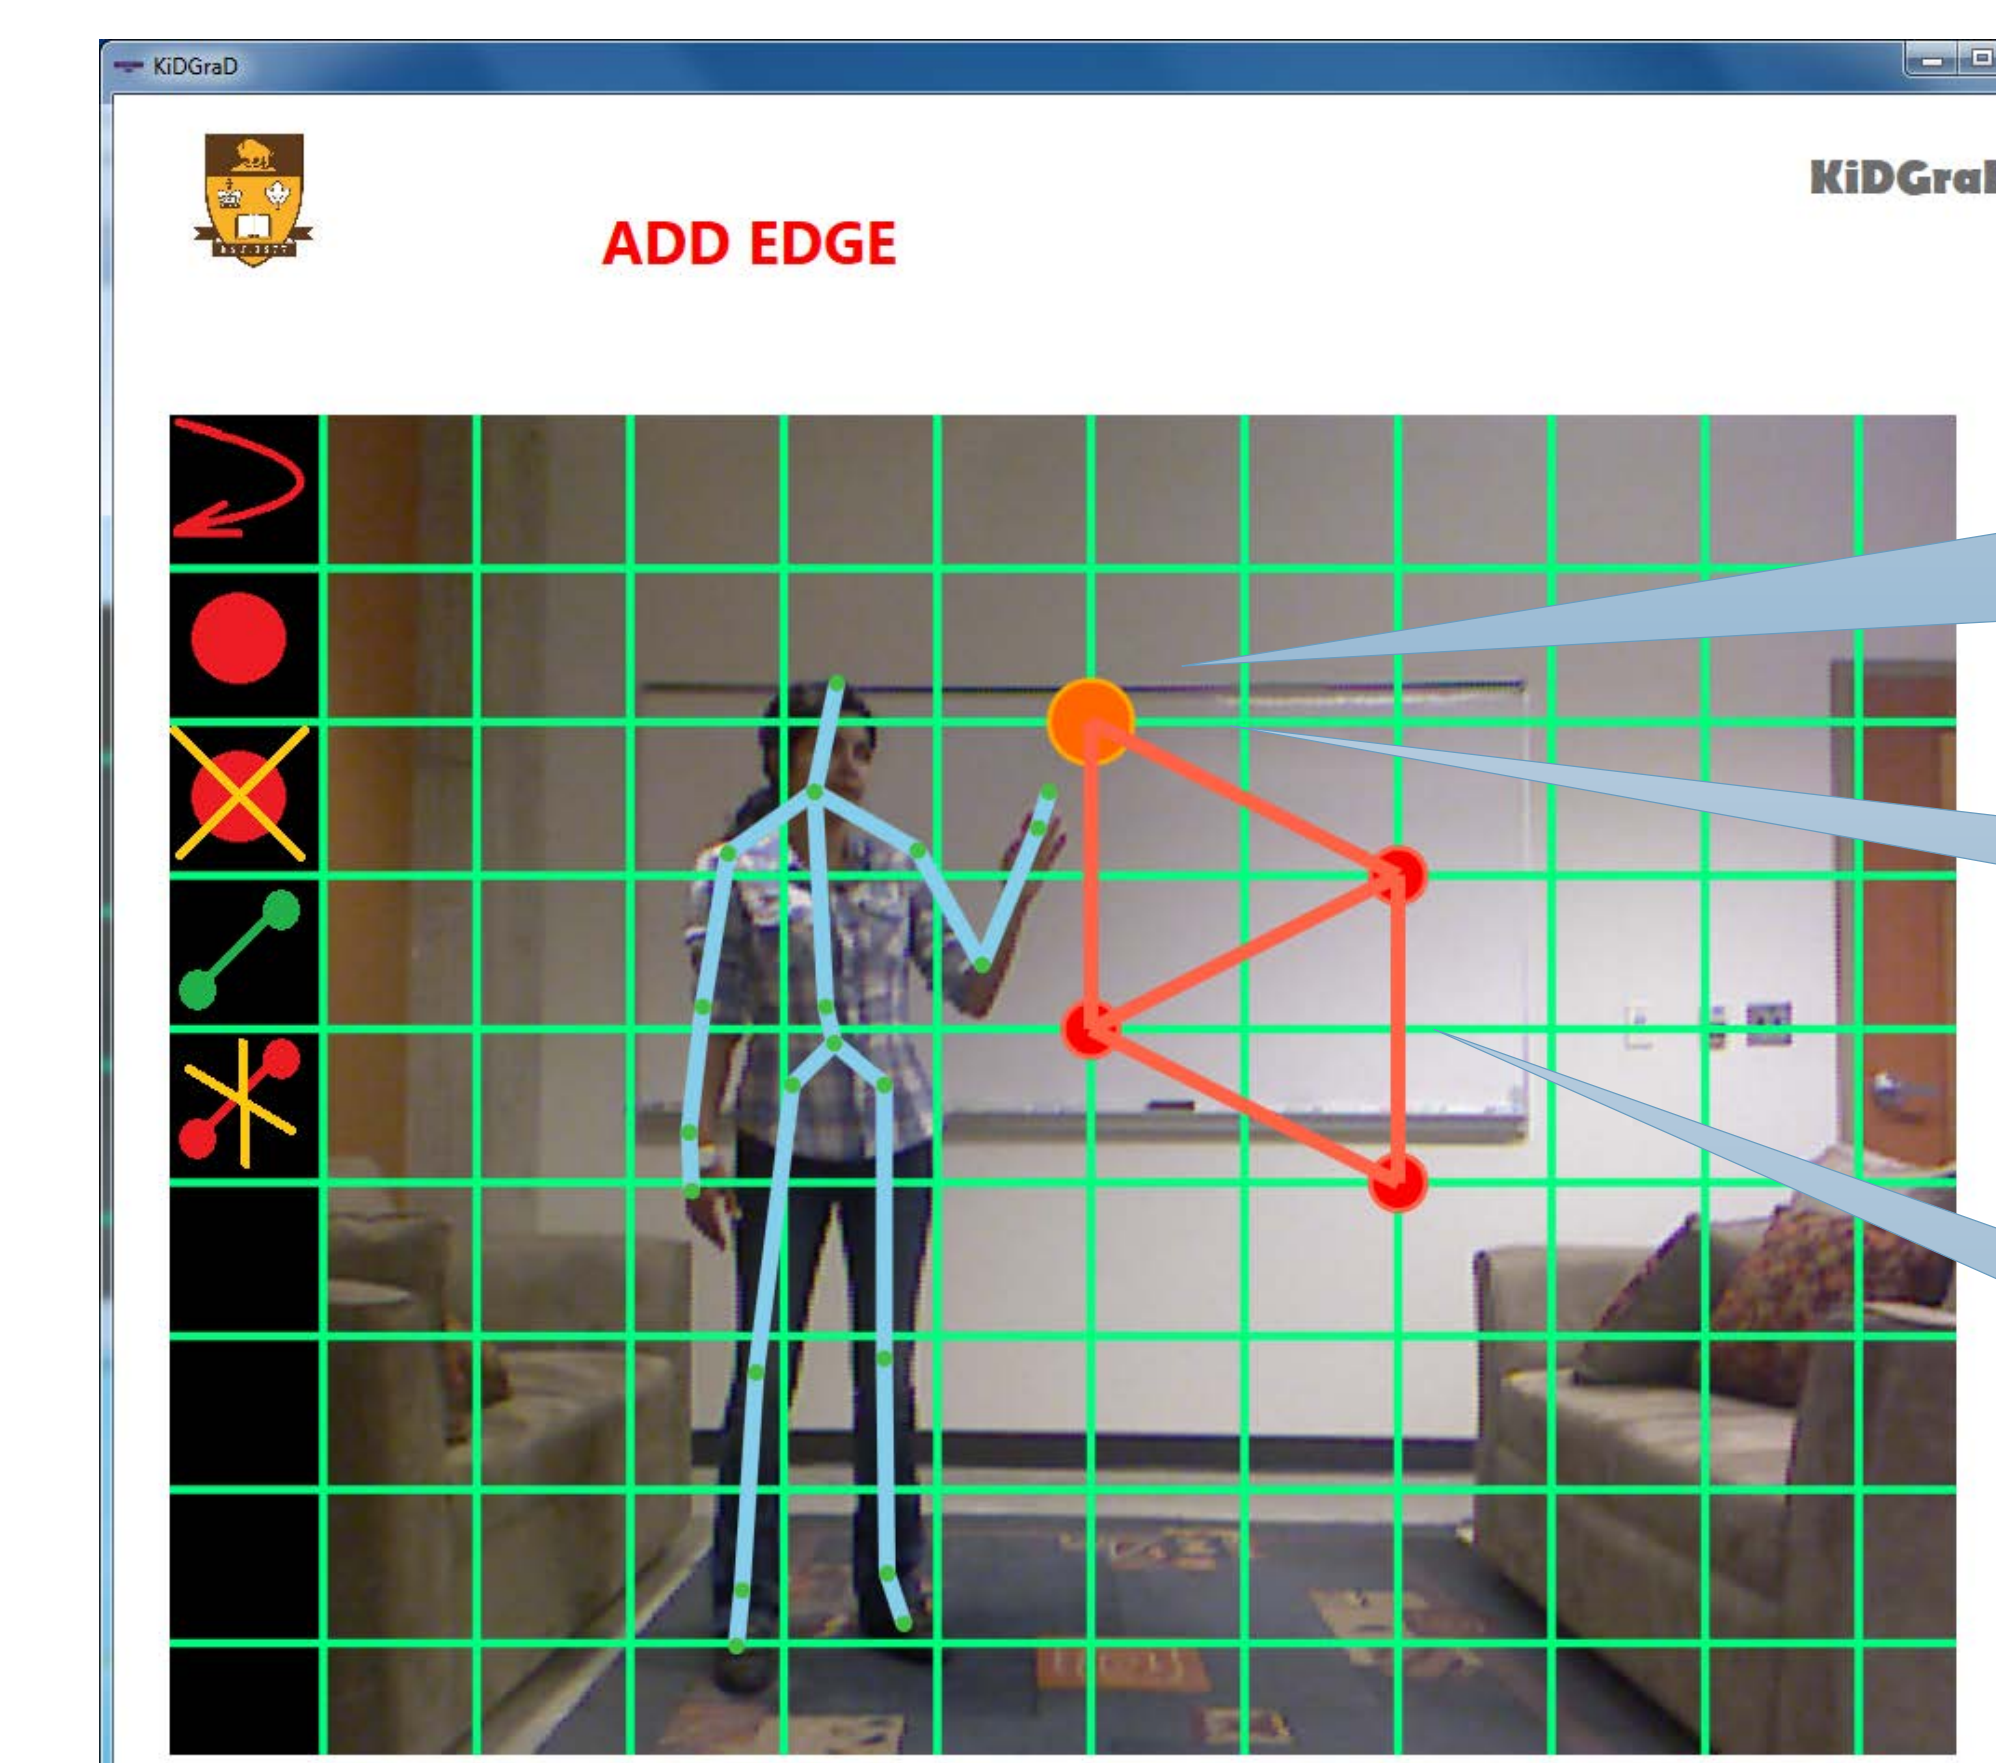

Posture for "Add Edge"

Posture for "Remove Edge"

- Step 2: Choose the endpoints of the edge.

Rotate the right  
hand around  
the target grid  
point twice.

The first selected  
endpoint flashes.

Edges are drawn  
in **red**.
