

Telecommunications Research Labs

1 Term Job Posting – Electronic Health Record Programmer

September – December 2010

Location: TRILabs

37.5 Hrs/Week

TRILabs creates innovative information & communications technologies (ICT) and trains students to enhance ICT expertise and improve Canada's global competitiveness. Labs in Edmonton, Calgary, Saskatoon, Regina, and Winnipeg, along with 51 partner members, collaborate to produce a unique synergy of industry, government and university.

TRILabs is looking for three enthusiastic students to perform (Web) programming/database design. The project is to implement java enterprise (J2EE) based web application modules to support integrating the healthcare enterprise (IHE) model profiles. The activities include analysis, design, programming, testing and documentation of the web modules.

Job Qualifications:

- Ability to understand and follow software design methodologies
- Good knowledge and proficient of Java J2EE language
- Good knowledge of database design and SQL
- Good communication and organization skills
- Familiarity with Unix/Linux will be an asset
- Familiarity with electronic health record terminology, the IHE framework and the ITI profile of the IHE standard will be an asset.
