Senior Business Analyst

National Leasing is seeking a highly motivated and experienced Senior Business Analyst. Reporting to the Manager of Project Management, the Senior Business Analyst assures the delivery of quality business solutions, on-time, and within budget. This is accomplished through the analysis of stakeholder needs and opportunities; business processes; the design, development, implementation and support of customized business solutions consistent with approved project plans.

The Primary Responsibilities of this Role Include:

- Define feature and functional requirements, producing product requirements, business rules, and user stories for development teams.
- Critically evaluate information gathered from multiple sources, recognize and reconcile conflicts, and distinguish user requests from the underlying true needs.
- Analyze and extract requirements from existing systems, participates in the design of the replacement system and ensures the solution meets the needs of the business.
- Serve as the conduit between the business and the software development team.
- Facilitate requirement elicitation and review sessions.
- Perform impact analysis on requests to change requirements and make recommendation based on the analysis.
- Provide assistance where required in the testing of the solution.
- Perform quality reviews which could include reviewing requirements documentation and business process model/flows.
- Understand and use applicable software and tools including SQL Editor, JAMA Contour and JIRA.

You Will Bring The Following Attributes To The Position:

- University degree in business, finance or computer science, or equivalent educational/professional experience
- 5+ years direct work experience as a business analyst
- Experience in the financial industry would be an asset
- Experience writing requirements and business rules. Ability to write user stories and specifications in an agile environment would be an asset.
- Experience with modeling techniques would be an asset.
- Strategic and creative thinker who can help synthesize multiple sources of information into a Software requirement.
- Flexibility to adjust to shifting priorities and deadlines and the ability to adapt and work effectively with a variety of situations, individuals or groups.
- Capable of exercising independent judgment and recognize the critical impacts to business.
- Ability to read Power Builder and Java Code would be an asset.
- Direct knowledge of database management, various data retrieval methodologies (including data importing to spreadsheets, graphs, etc).
- Excellent communication and presentation skills including the ability to influence and negotiate.
