

COMP 7210: Assignment 3

Due: October 27, 2011, 12 Noon

Objective: Provide research summaries of two papers related to your anticipated thesis topic, using \LaTeX and BibTeX.

Detailed Instructions:

1. In discussion with your supervisor, find two (journal or conference) papers that you think will be related to your anticipated research topic. These should not be the same papers as in Assignments 1 and 2, even if that paper was related to your thesis topic.
2. Submit a BibTeX file with full citations of both papers. The BibTeX entries should include these fields (at a minimum):
 - For `@journal`: title, author, journal, volume, year, pages.
 - For `@inproceedings`: title, author, booktitle, editor, year, pages.
3. Write a summary of both papers. Pay particular attention to paragraph structure (make sure each paragraph has a topic sentence). You should also include some comparison of the two papers: Do they solve the same problem? What is the difference between their approaches? If they do not solve the same problem, why and how are they both related to your research topic?
4. Be sure to use proper citations of both papers.
5. Each summary of each paper should follow (roughly) the format and length used in Assignment 1.
6. Submit your BibTeX file and \LaTeX file by email to me by the deadline.
